

(a)

(b)

Figure 4: **The effect of clone length and number of paired reads on P_ζ and $|\Theta_\zeta|$.** (a) P_ζ increases as the number of paired reads N or clone length L increases, but is constant as a function of N/L . (b) $|\Theta_\zeta|$ decreases as the number of paired reads increases or the clones length decreases. Note that all axes are log values (with the exception of P_ζ in (a)).
