

Figure S8

Figure S8: Simulations of the four connector-mediated models. The activation (A) and deactivation (B) dynamics of the regulator-protecting (RP) model (blue), the regulator-activating (RA) model (green), the phosphatase-inhibiting (PI) model (black), and the kinase-stimulating (KS) model (red). (C-F) The output of the RP model (C), the RA model (D), the PI model (E), and the KS model (F). In (C-F), we use the same input (G).
