

Table S3. Prediction of FGGY kinase functions in a list of selected genomes based on genomic and functional context prediction, as well as the identity of signature residues.
 Taxonomy_ID: the taxonomy identification numbers of the species; Species (Strain): the name and strain number of the species; Uniprot_list: the list of FGGY proteins identified by their Uniprot Accession numbers; Taxonomy_level: the taxonomy levels chosen in Figure 5 to collapse the species tree; Species: the name of species without counting strain names (when calculation existence of various FGGY functions in the species tree, the counts were averaged among various strains of the same species, which is represented only once on the tree); Functions: the existence of various FGGY functions (see Table 1 for the full names of different functions), a number larger than zero indicates a function exist in the genome, "0" indicates a function not exist in the genome.

Taxonomy_ID	Species (Strain)	Uniprot_list	Taxonomy_level	Species	GlpK	AraB	RbtK	GntK	XylB	LyxK	EryA	FucK	RhaB
