

Supporting Figure 21. Bootstrapping Results for MMR, t_{fit} from 1997 to 2009*

* Supporting Figure 21. Solid black line represents vaccine coverage/incidence data for $t \leq t_{\text{fit}}$; dashed black line represents vaccine coverage/incidence data for $t > t_{\text{fit}}$ (data from years $t \leq t_{\text{fit}}$ were used to fit model and produce model extrapolation to $t > t_{\text{fit}}$); dotted blue line represents the best fit of model to data for given value of t_{fit} ; thin red lines represent 50 bootstrap samples for a given value of t_{fit} .
