

Table S7. Summary of phenotypic values, variability thresholds and distribution of V_A/V_G ratios for the glycolysis model [20]. The first three columns list the phenotype abbreviations used in this study, a text description of the phenotypes and their units. The thresholds used to filter out datasets with very low relative and/or absolute variability are listed in the next two columns, followed by the number of Monte Carlo simulations (out of 1000) passing the threshold. The last 7 columns contain quantiles and means of the V_A/V_G values for the datasets passing the variability threshold.

Phenotype	Description	Units	Variability threshold		# of valid datasets	Quantiles and mean values of V_A/V_G
