

Table S9. Summary of phenotypic values, variability thresholds and distribution of V_A/V_G ratios for the circadian model [23]. The first three columns list the phenotype abbreviations used in this study, a text description of the phenotypes and their units. The thresholds used to filter out dataset with very low relative and/or absolute variability are listed in the next two columns, followed by the number of Monte Carlo simulations (out of 1000) passing the threshold. The last 7 columns contain quantiles and means of the V_A/V_G values for the datasets passing the variability threshold. Abbreviations: phosphorylated – phos., cytosolic – cyt., nuclear – nuc., bottom concentration – b.c., peak concentration – p.c.

Phenotype	Description (see legend for abbreviations)	Units	Variability threshold		# of valid datasets	Quantiles and mean values of V_A/V_G						
			rel.	abs.		Q _{0.05}	Q _{0.1}	Q _{0.2}	Q _{0.3}	Q _{0.5}	Q _{0.8}	mean
